

PRODUCT CHARACTERISTICS

Concentration:	1-1.5 mg/mL determined by UV absorbance at 280 nm (see vial label)
Specificity:	Reacts to HIV-1 p24 protein
Source:	Murine monoclonal IgG1 from serum-free culture supernatant
Purification:	Protein G chromatography
Purity:	≥ 90% (Coomassie blue SDS-PAGE)
Immunogen:	HIV-1 (Strain IIIB) lysate
Formulation:	100 µg in PBS, pH 7.2 No preservatives

STORAGE

Store at -10 °C or below. Repetitive freezing and thawing are not recommended (aliquot as necessary). Thawed material may be stored at 4°C for short-term usage.

APPLICATIONS

Western Blot: Use at ~1:1000 dilution

HIV-1 IIIB virus lysate proteins were separated by electrophoresis and transferred onto a nitrocellulose membrane. The following antibodies were used in Western blot analysis.

Strip 1 - Anti-HIV-1 p24 Clone 38/8.7.47

Strip 2 - Human Anti-HIV polyclonal

Additional proteins bands observed on strip 1 are derived from the precursor HIV-1 gag p55 and degradation products.

ELISA: Use at ~1:1000 dilution

Recommended dilutions are intended as a guide. Optimal dilutions should be determined by each laboratory based on the application. Conditions for applications such as immunoprecipitation, immunofluorescence and other EIA assays must be determined experimentally by the investigator.

For Research Use Only NOT for in vitro Diagnostic Use
