

PRODUCT DESCRIPTION:

Each aliquot contains 25 µg of DNA extracted from a partially purified preparation of Bacteriophage Lambda. The DNA was extracted from the phage following the whole blood spin protocol from the QIAamp[®] DNA Blood Maxi kit. DNA concentration and A_{260/280} ratios are determined using a NanoDrop ND-1000[®]. The extracted DNA also tested positive on an in-house real time PCR assay. The preparation also contains *Escherichia coli* DNA.

INTENDED USE:

Purified Genomic DNA is designed for use as an amplification and/or detection control for nucleic acid testing of Bacteriophage Lambda. It can also be used to determine a limit of detection (LOD), in diagnostic assay development, cross-reactivity studies or genomic sequencing. When used as a control for nucleic acid tests, the same protocols as those used to amplify extracted clinical specimens should be employed.

PRECAUTIONS:

- Use Universal Precautions when handling Genomic DNA.
- The material may be re-frozen after thawing. Repetitive freezing and thawing is not recommended (aliquot material if necessary).
- To avoid cross-contamination, use separate pipette tips for all reagents.

RECOMMENDED STORAGE:

This control is supplied in TE Buffer and should be frozen at -20°C or below.

DO NOT USE IN HUMANS. FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES.

These products are intended for research, product development or manufacturing use only. These products are NOT intended for use in the manufacture or processing of injectable products subject to licensure under section 351 of the Public Health Service Act or for any other product intended for administration to humans.
